

CHALLENGES WE ADDRESS

- **Fragmented and inaccurate patient data**—Healthcare organizations require trusted, secure, and national access to comprehensive patient records for better patient outcomes.
- **Manual and time-consuming patient data retrieval**—Clinicians require automated and timely patient data at the point of care for improved clinical decision-making and optimal productivity.
- **Cost and delay in care due to unnecessary duplicate testing**—Fragmented and inaccurate patient data and the need for manual patient data retrieval can result in unnecessary duplicate testing to understand the full clinical patient picture for clinicians.
- **Complex interoperability**—Healthcare organizations need simplified reporting options for Promoting Interoperability (PI), including obtaining bonus points for their PI total score.
- **Costly and complex connections to multiple EHRs and HINs**—Healthcare organizations exchange data with an average of 16 EHR vendors, resulting in higher cost and additional time and resources needed to manage multiple connections.

CORE SOLUTIONS

Sunrise™ Axon

Sunrise Axon, through its strategic partnership with Health Gorilla, a national Qualified Health Information Network (QHIN), empowers US-based Sunrise clients with seamless, timely, and secure access to comprehensive patient records for better patient outcomes.

Sunrise Axon delivers nationwide access to patient clinical data by connecting your EHR to the Health Gorilla Qualified Health Information Network (QHIN). This partnership facilitates the secure, automated exchange of Clinical Continuity of Care Documents, providing a more complete patient record at the point of care.

How Sunrise Axon helps

Inaccurate or incomplete patient data

Supports safer transitions of care and better clinical outcomes by delivering a more complete and longitudinal patient record to clinicians.

Clinician cognitive burden

Automates the retrieval of patient data from disparate systems, allowing clinicians to focus on patient care.

Complex interoperability reporting

Supports optional compliance with Promoting Interoperability objectives, including Health Information Exchange, through a single, streamlined connection.

Cost and resource inefficiency

Reduces delays and expenses associated with duplicate testing and eliminates the need to manage numerous individual connections to state and local HIEs.

Key features

- **Sunrise Integrated Health Exchange (IHE) connections**—provides full integration using existing Sunrise IHE connections to connect to Health Gorilla (QHIN) within existing Sunrise workflows.
- **Health Gorilla's National Record Locator Service and Master Patient Index**—ensure accurate data retrieval and a comprehensive patient summary. This retrieved documentation is seamlessly integrated into the Sunrise patient chart using your existing Search and Persist workflow, allowing for discrete data reconciliation of problems, allergies, medications, and immunizations (PAMI).

Outcomes we deliver

- **Improved care coordination, patient safety and outcomes**—Health Gorilla's National Record Locator Service and Master Patient Index ensure automated and accurate data retrieval as well as a comprehensive patient summary for improved care coordination, patient safety, outcomes and reduced clinician cognitive burden.

- **Reduced unnecessary and costly duplicate diagnostic testing**—The partnership between Sunrise Axon and Health Gorilla facilitates the secure, automated exchange of Clinical Continuity of Care Documents, providing a more complete patient record at the point of care, reducing the incidence of unnecessary duplicate testing and associated delays in care.
- **Minimized implementation costs**—By utilizing your established C-CDA workflows, ADT HL7 transactions, and IHE connection methods, Sunrise Axon requires no additional training for your clinical staff and minimizes implementation costs.
