

CHALLENGES WE ADDRESS

- **Time-consuming tasks**—Clinicians spend excessive hours on documentation, reducing time for direct patient care.
- **Increased burnout**—Repetitive and manual entry contributes to stress, fatigue and job dissatisfaction.
- **Documentation errors**—Manual documentation increases the risk of inaccuracies, negatively affecting care quality and compliance.

CORE SOLUTIONS

Sunrise™ Thread^{AI}

Sunrise Thread^{AI} is a native, AI-powered ambient scribe and documentation assistant that captures patient-clinician conversations in real time and automatically generates a structured summary of the visit directly into Sunrise Clinical Notes. By minimizing manual data entry, it streamlines workflows, improves documentation accuracy, and allows clinicians to focus on patient care, all from a desktop or mobile device.

How Sunrise Thread^{AI} helps

Time-consuming documentation

Automatically captures, transcribes, and interprets patient-clinician conversations in real-time, allowing more face time with patients.

Clinician burnout from administrative tasks

Reduces manual data entry, enabling clinicians to focus on care.

Risk of documentation errors

Ensures consistent, accurate records with AI-driven interpretation.

Disruption to patient conversations

Enables more natural conversations without note-taking distractions.

Inefficient workflow integration

Seamlessly integrated within Sunrise documentation for streamlined operations.

Key features

Mobile integration—Portability at its best

Use your mobile device to effortlessly record, review, and save patient conversations. Record on-the-go and complete notes later at your desktop for maximum flexibility.

Recording—Streamlined and intuitive

Access a simple recording module with clear identifiers and built-in troubleshooting for smooth, reliable documentation capture.

Note integration—Seamless documentation workflow

Easily review and incorporate AI-generated content directly into your preferred section of the clinical note.

Conversation control—Ensure accuracy and clarity

Edit recorded conversations in real-time or post-visit to refine language and confirm accurate interpretation capture.

Outcomes we deliver

- **Improved documentation efficiency**—Reduces time clinicians spend on charting to increase patient throughput and support a faster revenue cycle.
- **Reduced clinician burnout**—Lowers administrative burden, helping reduce burnout and improve job satisfaction, giving clinicians back hours in their days.
- **Enhanced documentation quality and accuracy**—Captures conversations in real time, minimizing errors and omissions in documentation. Supports stronger compliance, optimized billing and better clinical data.
- **Improved patient satisfaction**—Enables clinicians to focus fully on the patient without distraction from notetaking.
- **Increased workflow efficiency**—Integrates smoothly with existing systems, speeding up documentation and reducing duplication.
