

Access patient data from anywhere while reducing the cost and maintenance of your state and local HIE connections

It's time for an alternative.

Sunrise™ Axon

Sunrise™ Axon strategically partners with Health Gorilla, a national Qualified Health Information Network (QHIN), to empower US-based Sunrise clients with seamless, timely and secure access to comprehensive patient records for better patient outcomes. This partnership facilitates the secure, automated exchange of Clinical Continuity of Care Documents, providing a more complete patient record at the point of care.

Uses clients' established C-CDA workflows, ADT HL7 transactions and IHE connection methods, requiring no additional training for clinical staff while reducing implementation costs.

Key features

Improved care coordination

Supports safer transitions of care and better clinical outcomes by offering a complete and longitudinal patient record.

Reduced clinician burden

Automates patient data retrieval from disparate systems, enabling clinicians to focus on patient care.

Simplifies interoperability

Supports optional compliance with Promoting Interoperability objectives, including Health Information Exchange (HIE), through a single, streamlined connection.

Cost and resource efficiency

Reduces delays and expenses associated with duplicate testing and eliminates the need to manage numerous individual connections to state and local HIEs.

BENEFITS FOR CMIOS/CMOS:

- Helps drive better care coordination and transitions of care, which can directly support more positive patient outcomes and overall satisfaction. Increases provider efficiency, productivity and satisfaction, while promoting better speed to diagnosis and treatment.

BENEFITS FOR CFOS:

- Reduces duplicate testing costs and helps mitigate providers' cognitive burden. Lowers the cost of individual connections to state and local HIEs while also offering the resources required to maintain individual HIE connections.
